In India,
Polluted water
is a major cause
of several Water
borne diseases,
Like cholera,
typhoid, diarrhea,
hepatitis A,
dysentery,
& giardiasis

These illnesses are spread through Contaminated water sources and can lead to serious health problems, including hospitalization and death.

Water-borne diseases in India cause a significant burden on the population, with 37.7 million Indians affected annually

1.5 million children dying from diarrhea. Diarrhea diseases alone were responsible for over 60% of deaths from water-borne diseases.

This is all, Due to
Water Become More
Acidic & Less in Mineral.
